

Artificial Intelligence Standard

(Last Updated February 2026)

Scope

This policy applies to all **Phour Global Limited** employees and affiliates.

Safeguards

I. Introduction.

Phour Global Limited is committed to full compliance with applicable laws related to the use of artificial intelligence in the countries in which **Phour Global Limited** provides products and services. Additionally, **Phour Global Limited** is committed to the ethical use of artificial intelligence. This Artificial Intelligence Use Policy (“Policy”) outlines **Phour Global Limited**’s requirements with respect to the adoption of all forms of artificial intelligence at **Phour Global Limited**. Such artificial intelligence adoption includes use for business efficiencies, operations, and inclusion in **Phour Global Limited**’s products and services.

This Policy is applicable to all **Phour Global Limited** directors, officers, board members, employees, contractors, representatives, affiliates, agents, and any person or entity performing services for or on behalf of **Phour Global Limited**. The Responsible Corporate Officer at **Phour Global Limited** is responsible for the enforcement of this Policy.

II. Definitions.

“Artificial intelligence” or “AI” means the use of machine learning technology, software, automation, and algorithms to perform tasks and make rules or predictions based on existing datasets and instructions.

“Artificial Intelligence Committee” or “AI Committee” is an internal **Phour Global Limited** committee tasked with reviewing and approving uses of AI at **Phour Global Limited**.

“Artificial intelligence system” or “AI system” means software that is developed with one or more of the techniques and approaches listed in Annex I and can, for a given set of human-defined objectives, generate outputs such as content, predictions, recommendations, or decisions influencing the environments they interact with.

“Closed AI system” means an AI system where the input provided by one user is used to train the AI model. Input data from the user is isolated from other users, and the data is considered more secure.

“Embedded AI Tools” means AI tools embedded in existing software tools approved and used at **Phour Global Limited** and which do not require approval for use from the AI Committee.

“Government” means the government of a country or subdivision thereof.

“Government Entity” means any entity controlled by a government in whole or part. This includes Government-owned or controlled commercial enterprises, institutions, agencies, departments, instrumentalities, and other public entities, including research institutions and universities.

“Government Official” means any officer or employee of a Government Entity, an official of a political party, a candidate for political office, officers and employees of non-

governmental international organizations, and any person with responsibility to allocate or influence expenditures of Government funds. This includes data scientists and researchers who are employed by a government or a Government Entity. Employees at government organizations are considered Government Officials regardless of title or position.

“Non-public **Phour Global Limited** data” means any information that, if disclosed, could violate the privacy of individuals, government regulations or statutes, could jeopardize the financial state of **Phour Global Limited**, could injure its reputation, or could reduce its competitive advantage.

“Open AI system” means an AI system where the input provided by all users is used to train the AI model. Input data from all users is not private and may be revealed to other users.

“Personal information” means information that identifies, relates to, describes, is capable of being associated with, or could reasonably be linked, directly or indirectly, with a particular person or household.

“**Phour Global Limited** Representatives” means all **Phour Global Limited** directors, officers, board members, employees, contractors, representatives, resellers and sub-resellers, distributors and sub-distributors, affiliates, agents, and any person or entity performing services for or on behalf of **Phour Global Limited**.

III. Guiding Principles.

The intent of this Policy is to provide general guidance on the use of AI at **Phour Global Limited** so that **Phour Global Limited** can leverage the use of AI as a tool while ensuring it continues to meet legal obligations and act in an ethical manner. The use of AI at **Phour Global Limited** should never compromise **Phour Global Limited**’s core values or introduce undue risk

to the organization. Rather, the use of AI at **Phour Global Limited** should be focused on improving business efficiencies and enhancing **Phour Global Limited**'s ability to fulfill its mission.

It is important to remember that **Phour Global Limited** is a global organization. **Phour Global Limited** has entities and staff globally and provides its products and services to customers globally as well. Accordingly, this Policy provides overarching guidance based on global standards for the use of AI. **Phour Global Limited** Representatives should be cognizant when using AI at **Phour Global Limited** that they think about the global impact of their decision to use AI, as the use of AI in some countries may not be permitted in others.

This Policy is not intended to address every use of AI at **Phour Global Limited** by a **Phour Global Limited** Representative. There are certain business departments and functions at **Phour Global Limited** that bear more considerations and potential risks. Before using any AI at **Phour Global Limited**, whether for personal business tasks such as writing an email or more complex business processes such as analyzing datasets, you should consult with your manager and seek guidance. Also, please see Prohibited Uses in Section IV below for situations in which AI may not be used at **Phour Global Limited**, and High-Risk Use of AI Systems in Section VI below for situations in which extreme caution is required when considering using AI.

In addition, there are certain Embedded AI Tools used in existing approved **Phour Global Limited** software that do not require additional approval for use. For example, the use of Microsoft Word in which Microsoft Word has embedded an AI tool to check spelling or grammar. The use of Embedded AI Tools in approved software at **Phour Global Limited** is permitted, provided those software tools are aligned with previous general business uses. A list

of existing software tools with Embedded AI Tools that are approved at **Phour Global Limited** can be found here www.phourglobal.com.

When third-party software, services, or contractors are utilized or employed, any AI usage by software used by these parties or services must be noted and evaluated carefully. Contracted services that utilize AI technology should be considered in the same light as individual AI usage. Consult with the Legal Department about the inclusion of an AI-specific clause in any vendor or contractor agreements.

The following principles must be followed when considering using an AI system at **Phour Global Limited**:

- The use of an AI system should primarily focus on completing departmental goals as directed by company leadership. Except for the use of an Embedded AI Tool in a software system approved for use at **Phour Global Limited**, any use of a new AI System at **Phour Global Limited** must be approved by the AI Committee. Please see the Standard Operating Procedure here www.phourglobal.com for the process for getting an AI system approved. Also, see General AI Use Standards and Use Approval in Section VII below.
- Individuals using an AI system must have expertise in the subject matter for which the AI is used. AI is to be utilized as a tool and is not a substitute for expertise.
- All AI-generated content must be thoroughly reviewed by an individual with expertise to evaluate such content for accuracy, proofing, and editing. AI-generated content should be viewed as a starting point, not the finished product, and should conform to the **Phour Global Limited** brand and voice.
- Any use of an AI system must have clear objectives and business-accepted data sets.

- AI systems may contain inherent bias. Users are responsible for reviewing and correcting bias.
- Non-public **Phour Global Limited** information must never be put into an open AI system.
- **Phour Global Limited** Representatives must document all AI systems they are utilizing and for what functions.
- The use of an AI system must be documented to capture institutional knowledge.
- The use of an AI system must meet any contractual or terms-of-use limitations.
- Approval of an AI system does not eliminate the need for other internal approvals required at **Phour Global Limited**.

IV. Prohibited Uses.

Unless otherwise approved by the AI Committee and respective department heads, **Phour Global Limited** Representatives are prohibited from using AI systems for the activities listed in this section, including political lobbying, protected class categorization, entering sensitive or confidential data into open AI systems, obtaining legal advice, or creating high-value intellectual property intended for registration.

V. Ethical Guidelines.

Phour Global Limited desires to act in an ethical manner when using AI. All AI use must align with informed consent, integrity in use, appropriate content standards, and authorized use of company resources.

VI. High-Risk Use of AI Systems.

Phour Global Limited complies with global AI regulations, including EU classifications of high-risk AI use cases. Extreme caution must be used for AI systems involving personal data, hiring decisions, personnel decisions, enrollment decisions, or student assessments.

VII. General AI System Use Standards and Use Approval

Except for approved Embedded AI Tools, all AI systems must be approved by the AI Committee and meet lawful, ethical, transparent, and necessary use principles.

VIII. Training

All **Phour Global Limited** Representatives who interact with AI systems must be trained on this Policy. Additional training may be required for high-risk use cases.

IX. Reporting Non-Compliance.

Phour Global Limited directors, managers, employees, and agents who become aware of potential violations must report them through appropriate channels. Reports will be investigated, and disciplinary action may be taken up to and including termination.

ANNEX I

AI TECHNIQUES AND APPROACHES

- Machine learning approaches, including supervised, unsupervised, and reinforcement learning.
 - Logic and knowledge-based approaches, including expert systems.
- Statistical approaches, Bayesian estimation, search, and optimization methods.
